

Artwork Guidelines

For your artwork to progress smoothly and print correctly, please observe the following guidelines when supplying your digital files

- Our preferred file format is a print-ready PDF with crop marks.
- The trim box should be set to the size of the envelope
- Please supply the front and the back of the envelope as separate pages within the same PDF
- Artwork to print on the flap should be on the 2nd page (as though the flaps are closed) unless the envelope is a self-seal pocket.
- Please allow 3mm bleed on your artwork
- Ensure all fonts are embedded
- Ensure any security on the file is removed
- Ensure files to be printed in spot colours do not contain CMYK or RGB elements and all the suffixes are consistent
- Ensure files to be printed CMYK do not contain any RGB elements and any spot colours should be converted to CMYK
- Lines or strokes should be .35pt or thicker
- Windows on overprint jobs; please ensure that there is a minimum of a 2mm border clear of print around the window. In our experience a vignette gives the best result
- On 4 colour overprint we require 6-7mm grip along the long edge
- Black text and PPI's etc should be set to 100% black only
- Please ensure that there are crop marks on the artwork that are set to the trim box
